Northwind Logistics: Q3 2025 Operations Review

Prepared by the Operations team for the leadership meeting of 14 October 2025. This review covers July to September 2025 across our three regions: Europe, North America and Asia-Pacific.

Summary

Shipped volume grew 18% over Q2 to 2.41 million parcels. On-time delivery fell from 96.1% to 93.4%, almost entirely because of the warehouse management migration in Rotterdam in August. Revenue was 41.2 million dollars, 6% above plan.

Region	Parcels	On-time	Revenue (USD m)
Europe	1.02 m	91.8%	17.6
North America	0.87 m	95.2%	15.1
Asia-Pacific	0.52 m	93.9%	8.5

Support tickets

Customer support tickets rose 34% to 48,300. Two causes account for most of the increase: delivery-time questions during the Rotterdam migration, and a change to the returns portal on 2 September that hid the tracking number. The portal change was reverted on 9 September, and tickets returned to the Q2 level by the end of the month.

Median first-response time was 3 hours 40 minutes against a target of 4 hours. The new self-service tracking page, launched in July, now resolves about 22% of delivery questions without an agent.

Rotterdam migration

The Rotterdam warehouse moved to the new warehouse management system on 4 August. Pick rates dropped by 30% in the first two weeks while staff learned the new handheld flow, and recovered to the old rate by 1 September. Priya Raman led the migration; the post-incident review recommends a two-week parallel run for the Hamburg migration in Q1 2026.

Priorities for Q4

1. Bring European on-time delivery back above 95% by the end of November, with weekend shifts in Rotterdam until the backlog clears.

2. Move the returns portal to staged releases, so a change reaches 5% of customers before everyone.

3. Hire 12 support agents for the peak season, starting 1 November, funded from the Q3 revenue surplus.

Owner for all three: Marcus Lindqvist, Head of Operations.
